PROFESSIONAL SUMMARY

Technical Product Manager with a strong engineering background and experience building data, platform, and AI-enabled products. Proven at owning product requirements, prioritizing customer impact, and leading cross-functional teams from discovery to launch. Hands-on experience with analytics, cloud-native platforms, and AI integrations including MCP and AWS Q.

EDUCATION

Master of Science, Business Analytics (STEM) | University at Buffalo
Bachelor of Engineering, Computer Science and Engineering | Anna University

June 2024
May 2017

AREAS OF EXPERTISE

Product Ownership: Road mapping, Backlog Management, PRDs, Technical Requirements, Platform & API Products, AI/LLM Integrations Stakeholder Management, Product Prototyping, Product Analysis & Planning, Requirements Gathering, Cross-Functional Collaboration.
Data Management and Analytics: Business Intelligence, Pendo Analytics, SQL, Snowflake, Dynamo DB, ETL, Microsoft Azure DevOps, Jenkins, Jira, Confluence, Tableau, Azure Functions, AWS API Gateway, AWS Lambda, S3.
Programming Languages: Python, R, C#, Angular, .Net Core, Node.js.

EXPERIENCE

Technical Consultant, ConnectiveRx August 2024 - Present
Recruited to the Product team to own incident prioritization, analytics, and technical delivery, ensuring scalable AI-enabled platform operations.

- **Prioritized incidents** based on **customer impact, revenue risk, and SLAs**, coordinating cross-functional teams to ensure **rapid resolution**.
- Performed **risk assessments** on identified incidents, prioritizing issues, and deploying **risk mitigation strategies** to protect system integrity.
- Implemented **Pendo analytics** to analyze user behavior and funnel drop-offs, identifying friction points, improving engagement and adoption.
- Delivered an **Azure DevOps MCP integration with AWS Q**, unlocking AI-driven insights across repositories, builds, and CI/CD pipelines.
- Defined **product and integration requirements** in partnership with engineering to enable a secure, **scalable microservices architecture**.
- Designed **AWS cloud-native ETL workflows** with **Lambda, Step Functions, API Gateway, and S3, cutting processing time by 40%**.
- Established **proactive monitoring and observability** standards to **improve product reliability and reduce incident resolution time**.
- Acted as product SME for post-deployment support, ensuring smooth transitions **from development to production** for new features.

Associate Lead Developer, Customer Analytics August 2021 - May 2023
Recruited to the Product Development team to lead the modernization of Ashley's Order Management System (OMS).

- Owned **end-to-end modernization of Ashley's OMS**, focusing on enhancing scalability, efficiency, and user experience.
- Defined **product vision** for the new Order Management System, to streamline order processing and improve operational efficiency.
- Collaborated cross-functionally with stakeholders to **transform business needs into product features**, aligning tech solutions with goals.
- Developed and executed **strategic roadmap**, setting clear milestones and overseeing progress to meet target deliverables on time.
- Utilized **data analysis** to track system performance, informing iterative improvements that optimized **order processing efficiency**.
- Established and maintained **product backlogs using Azure DevOps**, capturing over **125 new user stories** emerging during development.

Software Analyst, Agilysys Inc. February 2019 - July 2021
Reporting to the Vice President of Engineering, this role involved developing a Loyalty & Promotions application from the ground up.

- Served as **Founding Engineer** for Loyalty & Promotions platform, owning feature delivery and stakeholder alignment.
- Led **requirements discovery** through **JAD sessions** and stakeholder interviews across **customers and business leaders**.
- Delivered **impactful demos to stakeholders and clients**, showcasing project functionalities and benefits, securing buy-in for implementation.
- Identified and **addressed performance bottlenecks** in development processes, reducing bug delays by 25% and improving code quality.
- Developed and executed a successful **go-to-market** strategy for a new feature, resulting in a 40% increase in revenue.
- Conducted **competitor analysis and industry research** to stay ahead of market trends and identify new opportunities for growth.
- Resolved **cross-functional conflicts**, facilitating agreement among **15+ stakeholders** and enabling successful implementation as planned.

Associate Software Engineer, CGI June 2017 - January 2019

- Supported requirements gathering with global stakeholders, including on-site collaboration in Finland.
- Improved release efficiency by automating QA workflows and CI pipelines, reducing manual effort by 40%.
